

INSTALLATION INSTRUCTIONS

MOBIL TEMP GAS WATER HEATERS • MODELS G 600 - G 800 SERIES

READ INSTRUCTIONS CAREFULLY BEFORE INSTALLING HEATER

- ① Locate outside position where heater is to be installed. (NOTE: Unit is not to be accessible from inside of trailer coach or mobile home.)
- ② Cut an opening $14\frac{3}{8}$ " high by $12\frac{7}{8}$ " wide in outer skin of trailer. Then remove insulation, exposing the inner wall of the trailer.
- ③ Using the bottom line of the exterior opening, cut the inner wall $12\frac{7}{8}$ " above the bottom line. Cut sides to the same width as exterior opening ($12\frac{7}{8}$ ").
- ④ Make framing to receive the heater. Framing is installed between the inner and outer walls of the trailer. Use at least 1" material top and 2 sides, being careful not to reduce the size of the opening. Fasten framing securely to the inside wall of trailer. This provides a backing to receive the screws which anchor the heater to the wall.
- ⑤ Unlock fastener and remove the front exterior cover.
- ⑥ Insert heater into opening. Use caulking liberally so that when the outer frame of the heater is screwed to the trailer a water-tight bond is made.
- ⑦ Install screws (16) in the holes provided. (Outside heater jacket frame.)
- ⑧ Connect water and gas lines. Fill tank with water.
- ⑨ Remove Service Manual before lighting. Manual to be placed in a safe, dry place inside of the trailer for owner's future reference.
- ⑩ Follow lighting instructions attached to the inside front of heater.
- ⑪ Replace and secure the exterior panel.

CAREFULLY CHECK FOR ANY AND ALL POSSIBLE WATER OR GAS LEAKS. ALL GAS CONNECTIONS SHOULD BE CHECKED WITH SOAPY WATER APPLIED BY BRUSH.

NOTE • NO HOLES OR OPENINGS SHALL BE PERMITTED WHICH COULD ALLOW THE PRODUCTS OF COMBUSTION TO ENTER THE LIVING AREA.
